PROFILE SUMMARY

I have a demonstrated capacity to recognize patterns and ideas in the cyberspace and to create and execute technology security plans to erect safe barriers that protect customers and enterprises to maintain the confidentiality, integrity and availability of the system. I communicate well and have excellent motivational abilities that can form and adapt well in productive environments. I have had the privilege to work in diverse environments and handle various aspects of the cyber security infrastructure, and I have always been passionate with technology and the protection of resources and data as I was born in a world where almost everything is done digitally.

WORK EXPERIENCE

OURSURANCE

2023 - PRESENT

Cyber Security Intern

- Responsible for the deep analysis of inbound emails for malware and phishing using tools like windows sandbox, virustotal, browserling and mxttoolbox.
- Monitor and create daily reports based on all the security triage tools like the EDR, SIEM, Email Security and the SOC team alerts for all detections.
- Make exclusions for websites and users - Content filtering
- Send monthly reports to managers to encourage their team members to complete the security awareness training.
- Responsible for blocking malicious email addresses on the email security gateway
- Vulnerability assessment once a week
- Use powershell to get hash values of documents for analysis
- Conduct phishing simulation every quarter of the year.
